As given in the syllabus, the percentage weights that were to be used were ccna2 (16%), ccna3 (16%), Lab Midterm (16%), Lab Final (18%), Module Exams/HW (12%), and Supplement Final Exam (22%). Also it was stated that extra points may be given for class participation. It would have been better to have weighted the Lab Final a little more and the Supplement a little less. The Lab Final was much more a true test of configuration skills than the Lab MidTerm.
